the power of clean energy

R60N
R70N
R85N

A large, stylized, light blue letter 'R' is positioned on the left side of the page. The 'R' is semi-transparent, allowing the background image of a blue sky with clouds to be visible through it. The sky transitions from a deep blue at the top to a lighter, almost white blue at the bottom. In the bottom right corner, there are some dark, horizontal, blurry shapes that appear to be parts of a forklift or a similar industrial vehicle.

The Carer forklifts range is meant to be a practical response to the demands of handling many application areas. And 'the fruit of attention and listening to our customers who have reserved all these years. We understand however that every activity and every company has its own characteristics that determine its competitive advantage. So we are ready to share your ideas and transform them as quickly as possible in a new logistics solution.

Carer has a wide range of three and four wheels electric forklifts with capacity ranging from 0.8 to 25 t, chosen by careful, demanding and international customers.

The exclusive line of quality.

The achievement of an innovative design cannot escape a stylistic study. Though not essential, it is, however, a determining factor in visually infusing the manufacturing approach underlying the design.

CARER has always stood out for the autonomous and innovative personalization of its trucks and has emphasized this quality once again, giving aggressive and straight lines to this new product which is at the top for ensuring safety, designed-in quality and performance.

COMFORT

Driving position is large and offers maximum visibility in every direction. The layout of controls and instruments on board follow the ergonomic dimensioning. The large cushioned seat is adjustable in every direction and even under the operator weight. Lateral armrests are reclining. Two wide steps facilitate access to driver's compartment. The visibility is perfect in every direction.

INSTRUMENTATION

Just one glance to have everything under control. Fork-lift drivers should never be distracted! Checking many instruments on the dashboard diverts operator's attention. CARER decided to condense into a single, comprehensive tool of control with back lighted LCD all details on the functionality of the truck. The display indicates the on-off status of attachments supplied, the state of battery charge. When the battery reaches the discharge limit, the tool locks the lifting function. Moreover, the display shows also the hours worked.

ELECTRONICS

All truck functions are managed by sophisticated microprocessor-controlled high frequency MOS electronics and regenerative braking. Traction, lifting and power steering control. Energy regeneration on breaking, on releasing the accelerator and on reversing the direction with the possibility to modify the pre-set parameters. Absolute softness and high efficiency featured by the motor-control system assembly. The single panel for easy cleaning and maintenance.

MOTORS

Top-class performance in safety! Carer motors are highly efficient and powerful.

They are tested and built using the most advanced technologies.

The armatures are vacuum-impregnated with resin.

Armature winding with strap and welding to the commutator are carried out using the copper-on-copper process.

They feature field weakening and H-class insulation.

The absence of sparking on the commutator ensures improved life.

DRIVE

The front differential gear is composed of a double reducer: the first one consists of a bevel gear set instead the second one is directed to the wheels through epicycloidal reducers.

STEERING AXLE

CARER fork trucks are equipped with a sturdy axle featuring elevated steering angles.

The hydraulic cylinder is in a protected position and utilizes the kinematics through ball joints and bearings.

POWER STEERING

To further enhance dynamic qualities, Carer has equipped its trucks with a smooth and accurate steering.

The steering system uses a very potent power steering, driven by a dedicated engine, to combine the lightness of the steering wheel with the precision of the guide.

BRAKING SYSTEM

The braking system is powerful and can be well modulated.

The friction material used is asbestos free.

Regenerative electronic braking can be used at all times with adjustable intensity.

MASTS

The lift units allow excellent visibility.

The lift cylinders are external to the profiles.

The integrated side shift does not reduce the rated capacity of the truck.

The mast profiles are cold treated to provide optimum resistance to bending and twisting, moreover ensuring greater load stability at high lift heights.

BATTERY

A high number of batteries (80V and 96V) of different amperage are available to increase the working endurance. The battery cover slides on rails and it can be opened without effort.

VDI 2198

Rev2 28/03/2011

(1) Integrated side shifter. (2) Lifting height > 4.5 m, 3°/ 7°. (3) Other capabilities on demand.

The performance data refer to the forklift truck in perfect working order, with battery weighing no less than the minimum indicated, recharged, well preserved and a voltage (closed circuit) not less than the normal one.
